# Our Water Filtration System

Our wall-mounted alkaline water filtration system is designed around a **6-stage filtration process** to support convenient access to filtered drinking water at the point of use.

## Sediment Filter

Helps reduce suspended particles such as dirt, sand, and rust.

## Pre-Filtration

Provides additional particulate protection.

## Carbon Filtration

Helps reduce chlorine and unwanted taste and odor.

## Fine Filtration

Provides additional filtration of selected fine particles.

## Mineral / Media Stage

Supports the intended water-conditioning process.

## Alkaline Stage

Raises the pH according to the system design.

**Important:** Final filter configuration should match the actual installed filter specifications and service documentation.

## Key Client Benefits

### Convenient access

Filtered drinking water available directly at the point of use.

### Tap-water connection

Direct connection to a suitable tap-water source, subject to installation requirements.

### Space-saving design

Wall-mounted format designed for suitable kitchen installations.

### Reduced delivery dependence

Can reduce reliance on regular bottled-water deliveries for daily drinking needs.

### Flexible use

Suitable for homes, offices, and selected establishments.

### Professional support

Installation, system orientation, and customer support are included according to the applicable package.
